Information for Immediate Release

Killer B™

“Killer B™ is so Realistic and Mobile that you will have gobblers strutting in your lap!”

Last spring we sent B-Mobile™ to a plastic surgeon and what came back was **Killer B™**. We updated the paint scheme to bring out more iridescent colors in the body and more red in his head. We gave him glass eyes from a taxidermist that makes him so realistic that it looks like he is staring at you. We created a tail fan that can move from full strut to $\frac{3}{4}$ strut to lying flat. We even updated his posture to make him look more like a strutting gobbler.

Killer B™ is made from the same proprietary formula that we have all come to love with B-Mobile™. You can also roll up Killer B™ for easy carry in your vest. This is the most realistic decoy on the market and the one you will find in all of the Primos® Video Team members' vests when they go into the field.

B-Mobile™ brought them in close. Killer B™ will have them strutting in your lap!
