FOR IMMEDIATE RELEASE

Darton Model Pro 300

Combines Dual-Cam Speed With Accuracy

COLUMBUS, Georgia, June 17, 2008 – Realtree Inc.

Whether you're a serious big-game hunter or a top-level competitor, your first shot with the Darton PRO 3000 bow will blow you away. Featuring the innovative CPS™ Hybrid 2-1/2 Cam System, the PRO 3000 will forever change the way you think about bow performance. The PRO 3000, available in Realtree Hardwoods Green HD®, is quieter, smoother and faster than what you'd expect from any bow thanks to Darton's CPS Hybrid 2-1/2 Cams. This 2 ½ Cam System takes bow performance way beyond that of both single-cam and 1-1/2 cam systems, truly combining dual-cam speed with the accuracy and ultra smooth shoot-ability Darton CPS bows are famous for.

The PRO 3000 bow is "Built to Hunt" with all of the features an archer requires. The bow is easy for set up. Draw length modules can be changed without a bow press. Darton's patented tuning lines on the cams ensure optimum performance. The PRO 3000 was engineered to achieve the optimum stored energy and level nock travel at all draw lengths (A Darton standard since 1996). Sims Vibration Technology adds to the shooting pleasure – smooth, lightning-fast and whisper-quiet.

Boasting thunderous speed, bone-breaking power and ultra-smooth performance, Darton's PRO 3000 has once again set a new standard to which all other bows will be compared.
